Reg 84 Development Requirements

When a new development or existing development is deemed by ACWWA to utilize reclaimed water for irrigation purposes, the requirements imposed by the Colorado Department of Public Health and Environment (CDPHE) dictate that a User Application and Site Management Plan (UASMP) form must be filled out by someone with legal authority for that entity. The legal contact will be responsible for regulating the reclaimed water program for that entity. This entity is defined as the “user”. Once the UASMP is filled out, the signed *original* will be sent to the ACWWA Regulation 84 Coordinator (whose contact information can be found [here](#)) for review and signature by ACWWA. The completed UASMP will then be submitted by ACWWA to the CDPHE for final review and determination. If the CDPHE accepts the terms of the UASMP, the CDPHE will issue a Notice of Authorization (NOA) to the user granting them authorization to use the reclaimed water.

Note: Until the user has been issued an NOA by the CDPHE, no reclaimed water can be used on the site. This can be a problem where landscape development has started and vegetation has been planted but irrigation water cannot be used until the CDPHE provides approval.

The approval process for issuing the NOA to the user can take up to 3 months. It's recommended to get this process started as soon as it is determined that reclaimed water will be used for irrigation.

Included in this document is the link to the CDPHE's website where a blank UASMP form can be downloaded: [UASMP Blank Form](#). The UASMP for landscape irrigation will be located under the section *User Applications and Authorizations*.

Requirements Outlined

1. Determination of reclaimed water to be used for irrigation for development.
2. User must fill out a UASMP form and submit the signed original back to ACWWA's Regulation 84 Coordinator whose contact information can be found [here](#).
3. ACWWA will review the submitted UASMP and then submit the final UASMP to the CDPHE.
4. The CDPHE will review the UASMP. This could take up to 3 months for full review and issuance of NOA to the user.
5. Once the user has the NOA, reclaimed water can flow to the user.
